

If blocks are 1.4m long and 0.7m high, and bottom of wall is buried 0.3m on footing of 0.3m:

Total 1.4m blocks: $24 + 20 + 15 = 59$; 0.7m blocks: $1 + 2 + 0 = 3$

Total weight: 86 tonnes over 31.5 m of concrete footing = 3,909 kg per m²
